Stephens L.R.;

Submitted (APR-1998) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: 3-PHOSPHORYLATES THE CELLULAR PHOSPHOINOSITIDE
PTDINS-4,5-SIPHOGPHATE (PTDINS (4,5)F2).
-!- CATALYTIC ACTIVITY: ATP + 1-phosphatidyl-1D-myo-inositol 4,5-bisphosphate = ADP + 1-phosphatidyl-1D-myo-inositol 3,4,5-

trisphosphate. ENZYME REGULATION: WHEN BOUND TO P101 THE P13K ACTIVITY OF P120 COULD BE ACTIVATED GREATER THAN 100-FOLD BY THE BETA-GAMMA G

-!- PATHWAY: SIGNALING PATHWAYS REGULATING CELL GROWTH. -!- SUBUNIT: HETERODIMER OF A 101 KDa SUBUNIT AND A 120 KDa CATALYTIC

-! - SIMILARITY: BELONGS TO THE PI3/PI4-KINASES FAMILY.

Scoring table:

Total number of hits satisfying chosen parameters:

Minimum DB seq length: 0 Maximum DB seq length: 2000000000

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

SwissProt_41:* Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Submitted (AUG-1996) to the EMBL/GenBank/DDBJ databases.
-!- PUNCTION: 3-PHOSPHOPYLATES THE CELLULAR PHOSPHOINOSITIDE
-!- PUNCTION: 3-PHOSPHATE (PYDINS(4,5)P2).
-!- CATALYTIC ACTIVITY: ATP + 1-phosphatidyl-1D-myo-inositol 4,5-
bisphosphate = ADP + 1-phosphatidyl-1D-myo-inositol 3,4,5-
trisphosphate - ADP + 1-yhosphatidyl-1D-myo-inositol 3,4,5-
-!- ENZYME REGULATION: ACTIVATED BY BOTH THE ALPHA AND THE BETA-GAMMA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   G PROTEINS.
-!- PATHMAY: SIGNALING PATHWAYS REGULATING CELL GROWTH.

- FUNCTION: PHOSPHORYLATES PTDINS (4,5)P2.

- PTDINS. DOES NOT PHOSPHORYLATES PTDINS (4,5)P2.

- PTDINS. DOES NOT PHOSPHORYLATES PTDINS (4,5)P2.

- CATALYTIC ACTIVITY: ATP + 1-phosphatidy1-1D-myo-inositol 4-phosphate PTDINS (4,5)P2.

- CATALYTIC ACTIVITY: ATP + 1-phosphatidy1-1D-myo-inositol 3,4-bisphosphate.

- CATALYTIC ACTIVITY: PUND MOSTLY IN THE MICROSOME, BUT ALSO IN THE PLASNA MEMBRANE AND CYTOSOL.

- THESE PLASNA MEMBRANE AND CYTOSOL.

- THESE PLASNA MEMBRANE AND LOWEST IN PERIPHERAL BLOOD, SKELETAL MUSCLE AND KIDNEY.

- SIMILARITY: BELONGS TO THE PI3/P14-KINASES FAMILY.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                                                                                                                                                                                                                                                       This is the deduced amino acid sequence of the p120 catalytic subunit of pig deprotein regulated phosphatidylinositol-3' kinase (PI3K), a heterodimeric enzyme which produces the intracallular messenger phosphatidylinositol (3,4,5)-triphosphate in response to activation of trimeric g protein-linked receptors. This novel protein, which also contains a regulatory subunit, plu1 (see AMX3946), is found in cells of haematopoietic origin and is involved in mmune system responses which cause inflammation. plu1 cDNA (see ANV04634) was obtained from a neutrophil cDNA library. The invention encompasses pig and human piul and p120 nucleotides (see AAV04633-34), host cell expression systems, plu1 and p120 proteins (see AAV04633-34), host cell expression systems, plu1 and p120 proteins (see AAV03946-49), host cell expression systems, polypeptides and peptides. Outpoines which are useful for treating inflammatory response disorders can be useful for treating through the p101 subunit.

C identified by screening assays using a protein activated P120 subunits) can be used to treat arthritis, septic shock, adult respiratory distress syndrome (ABDS), pneumonia, asthms, allergies, reperfusion injury, atherosolerosis, cancer and Alzheimer's disease.

The nucleic acids and their products can also be used for diagnosis, drug screening and clinical trial monitoring of inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120

                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence represents a novel catalytic subunit, p120, from porcine phosphoinositide 3-hydroxykinase (PI3K) which is regulated by beta-gamma subunite of trimeric G-protein. Nucleic acid coding for p101 or p120, or their fragments, are used as probes and primers for identifying p101 or p120 gene mutations, allelic variations or regulatory defects, particularly for the diagnosis of activation disorders (or susceptibility) in cells of the hematropoietic system. The related proteins, antibodies, agonists and antagonists can be used similarly. The p101 and p120 proteins, peptides or fusion proteins are used to treat or soreen for potential agents for treating immune disorders, particularly inflammation, e.g. arthritis, septic shock, adult respiratory distress syndrome, pneumonia, asthma, allergies, reperfusion injury, atthress attherosclerosis, Alzheimer's disease and cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       240

                                                                                                                                                                                                                                                                                                                                                                                                       This sequence represents the pig pl20 regulatory protein.

The invention relates to the human pl01 regulatory protein.

The invention relates to the human pl01 regulatory protein.

Which is a subunit of the trimeric 6-protein regulated phosphoinositide only. As a subunit of the trimeric 6-protein can be used in screening assays to detect compounds which can be used to treat inflammatory response disorders. The compounds identified may be antagonists or agonists of G protein-regulated Pl3K gene expression and/or pl01 or pl20 gene product activity. These compounds may then be used to control immune system disorders, in particular arthritis, septic shock, adult respiratory distress, asthma, allergies, reperfusion injury, atherosclerosis, Alzheimer's disease and cancer. Pl01 proteins and peptratory distress us be used in the detection of mutant or inappropriately can hammatopoietic lineage cell activation disorders which will also assist in devising a proper treatment or therapeutic regime. Using compounds which affect the signal transduced by the activated pl01 regulatory subunit to screen for compounds also allows compounds which affect the signal transduced by the activated pl01 regulatory subunit to be identified.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  180

                                                                                                                                                                                                                                                                                                This sequence represents a novel catalytic subunit, p120, from human phosphoinositide 3-hydroxykinase (PI3K) which is regulated by beta-gamma subunite of trimeric G-protein. Nucleic acid coding for p101 or p120, or their fragments, are used as probes and primers for identifying p101 or p120 game mutations, allelic variations or regulatory defects, particularly for the diagnosis of activation disorders (or susceptibility) in cells of the hematropoietic system. The related proteins, antibodies, agonists and antagonists can be used similarly. The p101 and p120 proteins, peptides or fusion proteins are used to treat or screen for potential agents for treating immune disorders, particularly inflammation, e.g. arthritis, septic shock, adult respiratory distress syndrome, pneumonia, alteries and cancer.

                                                                                                                                                                                                          This sequence represents the human plo0 regulatory protein.

The invention relates to the human plo1 regulatory protein.

The invention relates to the human plo1 regulatory protein.

Which is a subunit of the trimeric G-protein regulated phosphoinositide

Which asserves (PI3K). The plo1 regulatory protein can be used in screening

assays to detect compounds which can be used to treat inflammatory

response disorders. The compounds identified may be antagonists or response disorders. The compounds may then be used to control of gene product activity. These compounds may then be used to control immune system disorders, in particular arthritis, septic shock, adult respiratory distress, asthma, alergies, reperfusion injury, atherosclerosis, Alzheimer's disease and cancer. Plo1 proteins and peptides can be used in the detection of mutant or inappropriately

captises can be used in the detection of mutant or inappropriately

and haematopoietic lineage cell activation disorders which will also assist in devising a proper treatment or therapeutic regime. Using compounds which affect the signal transduced by the activated plo1

regulatory subunit to be identified.

The present invention relates to identifying a modulator of the phosphatidylinositol 3-kinase (PI3K; pl10delta) enzyme that binds to the catalytic subunit via a SH3 domain-containing polypeptide such as inASP-1. Also described are methods of assaying the specific binding affinity of the PI3-kinase binding partner. Such modulators are useful for the treatment of diseases characterised by the undesirable or excessive activity of PI3Kdelta. For example the modulators can be used for inhibiting the growth or proliferation of cancer cells or inhibiting the growth or proliferation of cancer cells or inhibiting the growth or proliferation of cancer cells arithment of long and lymphoma, leukaemiae), inflammatory diseases (e.g. rheumatoid arthmentois), ophthalmic disorders (e.g. allergic conjunctivitis), bowel diseases (e.g. systematic lupus erythematosus), inflammatory dermatoses (e.g. chronic inflammatory bowel diseases (e.g. chronic inflammatory bowel diseases (e.g. chronic inflammatory bowel diseases (e.g. chronic inflammatory dermatises mellitus. The present sequence represents human isoform of PI3k.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      120

This is the deduced amino acid sequence of the p120 catalytic subbunit of human G-protein regulated phosphatidylinositol-3' kinase (P13K), a heterodimeric cargyme which produces the intracellular messenger phosphatidylinositol (3,4,5)-triphosphate in response to activation of trimeric G protein-linked receptors. This novel protein, which also contains a regulatory subunit, p101 (see AAW23349), is found in cells of haematopoietic origin and is involved in immune system responses which cause inflammation. Human p120 cDNA was obtained from a leukocyte CDNA library. The invention compasses pig and human p101 and p120 nucleotides (see AAW04633-34), host cell expression systems, p101 and p120 proteins (see AAW03346-49), cusion proteins, and transgenic and knockout animals. Compounds which are useful for treating inflammatory response disorders can be useful for treating inflammatory response disorders can be useful for treating the interaction between the p101 and p120 cubunits) can be used to treat arthritis, septic shock, adult respiratory distress syndrome (ARDS), pneumonia, asthma allergies, creperfusion injury, atherosclerosis, cancer and Alzheimer's disease. The nucleic acids and their products can also be used for diagnosis, disease. Ή, 95.0%; Score 5500.5; DB 19; Length 1101; 94.7%; Pred. No. 0; tive 23; Mismatches 34; Indels 1; (

                                                                                                                                                                                                                                                                            Library using PCR primers corresponding to amino acid sequences
KNGDDLR and HIDFG. The amplified fragment was used to probe a human
US37 cell cDNA library and several overlapping clones were isolated.
US37 cell cDNA library and several overlapping clones were isolated.
US37 cell cDNA library and several overlapping clones were isolated.
US37 cell cDNA library and several overlapping clones were isolated.
US37 cell cDNA library and several overlapping clones were isolated.
US37 cell cDNA library and several overlapping clones were isolated.
US37 cell cDNA library and several overlapping clones were isolated.
US38 captured from the known PI3K-alpha and -beta enzymes.
Usam PI3K-gamma having the present sequence of 1050 residues, was then isolated. The enzyme on be used as an immunogen. The enzyme, corresponding sequence in the claimet section, receptor-mediated signal transmission, histeamine secretion, nerve cell differentiation,
US38 changsort and anti-lipolytic activity or for treating

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          GEEIHLVLDTPPDPALDEVRKEEWPLVDDCTGVTGYHEQLT----IHGKDHESVFTVSL 354
                                                                                                                                                                                                                                                                                                                                           Southern blot analysis was performed using a bovine cDNA probe contg.

a fragment of a PI3-kinase-encoding sequence and human cDNA isolated
from a cDNA library constructed from mRNA isolated from the human
cell line KGla. Positive clones were sequenced to give a human
cell line KGla. Positive clones were sequenced to give a human
cell line KGla. Positive clones were sequenced to give a human
bloop with the bovine sequence. The domain encoding residues 19-
non ology with the bovine sequence. The gene may be used to
growide a protein with PI3 kinase activity, and is useful for
creening for (ant) agonists of PI3 kinase activity which could be
useful for stimulation or inhibition of cell proliferation and hence
prophylaxis or therapy. Platelet or neutrophil activity or blood
glucose levels can be controlled using the kinase.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Southern blot analysis was performed using a bovine cDNA probe contg.

a fragment of a PI3-Kinase-encoding sequence and human cDNA isolated
from a cDNA library constructed from mRNA isolated from the human
cell line KGla. Positive clones were sequenced to give the human
cell line KGla. Positive clones were sequenced to give the human
with the bovine sequence. The domain contg. residues 19-100 of human
plu is sufficient to associate with the p85 kinase subunit. The
protein with PI3 kinase activity is useful for screening for
cant) agonists of PI3 kinase activity which could be useful for
stimulation or inhibition of cell proliferation and hence
probpylaxis or therapy. Platelet or neutrophil activity or blood
glucose levels can be controlled using the kinase.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       78
                                                                                                                                                                                                                                                      The present invention relates to identifying a modulator of the phosphatidylinositol 3-kinase (PI3K; pi10delta) enzyme that binds to the catalytic subunit via a SH3 domain-containing polypeptide such as LASP-1. Also described are methods of assaying the specific binding affinity of the PI3-kinase binding partner. Such modulators are useful for the treatment of diseases characterised by the undesirable or excessive activity of PI3Kdelta. For example the modulators can be used for inhibiting the growth or proliferation of cancer cells (e.g. malignant neoplasms of lymphoid and reticuloendothelial tissues,
                                                                                                                                                                                                                                                                                                                                                                            Hodgkin's lymphoma, leukaemias, inflammatory diseases (e.g. rheumatoid arthritis), ophthalmic disorders (e.g. allergic conjunctivitis), autohmmune diseases (e.g. systematic lupus erythematosus), inflammatory bowel diseases (e.g. chronic inflammatory bowel disease), inflammatory dermatoses (e.g. context dermatitis; central or peripheral nervous system inflammatory disorders (e.g. meningitis), bacterial pneumonia, and Type I diabetes mellitus. The present sequence represents human
